

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

- The American Journal of the Medical Sciences. Edited by Isaac Hays, M.D. No. XLVIII, for August. Philadelphia, 1839.—*From the Editor.*

A communication from the Academy of Natural Sciences, was received, under date of the 23d of July, relating to a pro-

posed National Museum in connexion with the Smithsonian legacy. Whereupon it was

Resolved, That the Academy of Natural Sciences be respectfully informed that their communication has been carefully considered by the American Philosophical Society, and that the Society has to regret that in view of the indirect and unofficial manner in which the wishes of one of the members of the Government at Washington has been conveyed to them, respecting the disposition of the Smithsonian legacy, the Society does not feel at liberty, at the present time, to take action upon this subject.

A communication from the foreign Secretary of the Royal Society of London, in relation to magnetic observations was referred to the astronomical committee.

Dr. Dunglison described the appearances which he had witnessed, in company with Professor Silliman, after the tornado of the 31st ultimo, at New Haven. The evidences appeared to him to favour the idea of a gyratory motion. The direction of the storm was from south-west to north-east.

Mr. Justice described a similar tornado which had occurred on the same day, fifteen miles north of Philadelphia, showing evidence, in his opinion, of a similar movement of gyration.
